

Clean Sweep Spray Boom

Eliminates Problems with:

- ***Tall Weeds***
- ***Low Branches***
- ***Strong Winds***

This front or mid-mounted herbicide boom is the ideal way to spray in orchards with standing weeds or low tree branches. With the **Clean Sweep Spray Boom**, the weeds

are laid down and sprayed completely from the roots up, while the spray shield lifts and protects any low hanging limbs. This makes it possible to spray anytime without wind interference.

The **Clean Sweep Spray Boom** has a rubber whip on the outer end to lay the grass down around and between trees. This unique design has two breakaways, one near the outer tip which will break back in the event of heavy tree contact. The second breakaway is at the point of mounting,

which allows the entire boom to swing back if the boom contacts the ground. This allows the perfect spray pattern to continue even if a tractor wheel falls into a hole or rut.

The **Clean Sweep Spray Boom** is manually adjustable for row width or can be hydraulically controlled with an optional cylinder kit.

This new boom is raised and lowered hydraulically, allowing the operator to keep a constant boom height even on hilly terrain. This also allows the boom to stand straight up for transporting or to get around obstacles, without getting off the tractor.
