

BRUSH

Ground Hog

SWEeper

For the Plantings of Today and Tomorrow

A new concept in orchard maintenance has been developed especially for dwarf and semi-dwarf plantings.

The GROUND HOG, using rubber pads so as not to damage tree bark, sweeps brush and debris from tree row, into windrow to be chopped or pushed. This also has proven to be very beneficial in cleaning ground, prior to herbicide application for better weed control.

The GROUND HOG'S adjustable arm for all plantings rides on a disc under the sweep to follow the contour of the ground, and can clean over 5 acres per hour.

The GROUND HOG mounts on the front or 3-pt. of your tractor, and uses existing tractor hydraulics. This unit mounted on front, sweeps ground ahead of tractor so brush and debris can be disposed of at the same time by trailing chopper. We also manufacture a double arm GROUND HOG. Both are capable of any row width.
