

“N” Model Box Shuttle

**“FOR USE IN TODAY’S
HIGH DENSITY ORCHARDS”**

*The greatest labor saving device
since bulk bins, unique patented
design with years of proven savings.*

SELF LOADING - SELF UNLOADING

The new **“N” MODEL BOX SHUTTLE** was designed especially for the narrow, high density orchards of today. Its narrow overall width of less than sixty (60) inches will accommodate most bins and it’s specially designed hydraulic tilt hitch allows a much sharper turning radius for easy access to even the narrowest rows. The optional automatic “Tail Hook” prevents bins from sliding off the back end while traveling on hilly terrain.

The **“N” MODEL BOX SHUTTLE** with a high flotation tandem axle for a gentle ride is faster and more maneuverable in the high density orchards with far less damage to fruit or trees. With these many new features it has become a necessary tool for efficient bin placement and fruit removal in today’s orchards.

FEATURES

- Less than 60 inches wide for narrow tree row spacing’s
- Takes the place of several orchard lifts
- Hydraulic driven roller chain for long smooth operation
- Uses existing tractor hydraulic system
- Adjustable hitch for different drawbar heights

OPTIONS

- Tractor mounted valve
- Side rails
- Side Steps
- Automatic “Tail Hook” to prevent bins from sliding off on hilly terrain
